NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This as sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence.

* This sequence will be replaced

Genes with similarity to proteins in the databases are described
foreduct or 'note' qualifiers. Genes that have no significant
product' or 'note' qualifiers. Genes that have no significant
protein similarity are described as 'unknown protein'.

The software programs used to predict genes include: Grail
(Informatics Group, Oak Ridge National Laboratory,
http://compbio.ornl.gov/grail.1.3/,
GENSCAN (Chris Burge, MIT, http://CCR-081.mit.edu/GENSCAN.html),
NetGenez (S.M. Hebsgaard, et al., CBS, Technical University of
Denmark, http://www.cbs.dtu.ddk/services/NetGenez/) and
SplicePredictor (Volker Brendel, Stanford University,
http://gramlinl.zool.lastate.edu/cgi-bin/sp.cgi).
Genes encoding tRNAs are predicted by tRNAscan-SE
(Sean Eddy, Washington University School of Medicine, St. Louis,
http://genome.wustl.edu/eddy/tRNAscan-SE/).
This sequence may not be the entire insert of this clone. It may be
shorter because we remove overlaps between neighboring submissions.
The 5' clone is K2188 and the 3' clone is K2K18.

                Submitted (26-AFW-1999) Tashkazu Nakamura, Kazusa UNA Kesenron Institute, Department of Plant Gene Research; 1532-3, Yana, Kisarazu, Chiba 292-0812, Japan (E-mail:ynakamu@kazusa.or.jp, Address for correspondence: Kaso@kazusa.or.jp Address for correspondence: Kaso@kazusa.or.jp For the latest information on annotation of this clone, please see http://www.kazusa.or.jp/kaos/cgil-bin/add_graph.ogi?c-WFF24 Genes with similarity to proteins in the databases are described in 'product' or 'note' qualifiers. Genes that have no significant protein similarity are described as 'unknown protein'.

The software programs used to predict genes include: Grail (Informatics Group, Oak Ridge National Laboratory, http://compbio.ornl.gov/Grail-1.3/), GENSCAN (Chris Burge, MIT, http://CCR-081.mit.edu/GENSCAN.html), NetGene2 (S.M. Hebsgaard, et al., CBS, Technical University of SplicePredictor (Volker Brendel, Stanford University, http://www.cbs.dtu.dk/services/NetGene2// and SplicePredictor (Volker Brendel, Stanford University, Http://genome.wustl.edu/eddy/tRNAscan-SE (Sean Eddy, Washington University School of Medicine, St. Louis, https://genome.wustl.edu/eddy/tRNAscan-SE (Sean Eddy, Washington University School of Medicine, St. Louis, This sequence may not be the entire insert of this clone. It may be shorter because we remove overlaps between neighboring submissions.

This Sequence is MIEL5 and the 3 clone is K24M9.

                                                                               This is the nucleotide sequence of DNA encoding LSD1-interacting protein K (see AAW72391) of Arabidopsis thaliana. LSD1 interacting genes (see AAW6735-67) were isolated from a yeast gene expression library constructed in plasmid pUG4-5 using RNA from Arabidopsis leaves infected with Pseudomonas syringae. A two-hybrid system was used with LSD1 short and long open reading frames (see AAW6750-51) as balt. LSD1 (see AAW72366-67) is a novel polypeptide that regulates the initial response of plants to pathogens and the subsequent spread of plant cell death engendered by infection. Because the inactivation of LSD1 by mutation leads to enhanced disease resistance, LSD1 partner proteins represent novel targets for esistance, LSD1 partner proteins represent novel targets for eninearing plants with enhanced resistance to pathogens. Thus, the invention includes all proteins (see AAW72384-96) that interact with the cell death regulator LSD1.
                                                                                                                                                                                                                                                                                                                                                                                                                                      ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     210 atgtgggagtagagtgcattatattgtttgctgggactgacaggattgcctagcctata 269
